DETAILED ACTION

1. Applicant's filing Appeal Brief dated Aug. 6, 2009, responds to the Advisory action mailed July 17, 2009 provided in the rejection of claims 1, 5-8, 11-13, 17-19, and 23-24.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Christian Austin-Hollands (Reg. No. 46,527) on 11/5/2009 to place the claims in the condition for allowance.

3. The application has been amended as following:

- Claims 6, 12, 18 and 24 are canceled.
- Claim 1,

A method of instructing a computer program to self-optimize, said method comprising: inputting a selection command that selects one function from a list of pre-selected functions for input into said computer program at a point of choice determined by a programmer, wherein each function from said list of pre-selected functions is associated with a reward; and allowing a learning protocol comprised of learning instructions in said computer program to track and reward said one function that is selected and to determine an approximate optimal choice of operation of said computer program based on said selection command and further comprising

inputting a reward command that provides a reward, at a point of choice, determined by a programmer, in said computer program, for said one function selected by said selection command, which results in said approximate optimal choice for self-optimizing said computer program.

▪ Claim 7,

A method of optimizing a computer program, said method comprising: specifying at least one point of choice, determined by a programmer, in said computer program; defining a set of alternate choices at each point of choice, wherein said set of alternate choices include operational choices comprising: inputting a selection command that selects one function from a list of pre-selected functions for input into said computer program, wherein each function from said list of preselected functions is associated with a reward; allowing a learning protocol comprised of learning instructions in said computer program to track and reward said one function that is selected to determine an approximate optimal operation of said computer program based on said selection command; and setting at least one feedback point for said each point of choice; and wherein said set of alternate choices include operational choices, and wherein said method further comprises: inputting a reward command into said computer program at a point of choice, determined by a programmer, wherein said reward command provides reward in said computer program for said one function selected by said selection command, which results in said approximate optimal choice for optimizing said computer program.

▪ Claim 13,

A program storage device readable by computer, tangibly embodying a program of instructions executable by said computer to perform a method of instructing a computer program to self-optimize, said method comprising: inputting a selection command that selects one function from a list of pre-selected functions for input into said computer program at a point of choice, determined by a programmer, wherein each function from said list of pre-selected functions is associated with a reward; and allowing a learning protocol comprised of programmer determined learning instructions in said computer program to track and reward said one function that is selected and to determine an approximate optimal choice of operation of said computer program based on at least said selection command and further comprising inputting a reward command that provides a reward, at a point of choice, determined by a programmer, in said computer program, for said one function selected by said selection command, which results in said approximate optimal choice for self-optimizing said computer program.

▪ Claim 19,

A computer system comprising: a memory encoding a computer program; a pre-compiler that inputs a selection command at a point of choice, determined by a programmer, into a said computer program that runs on a computer, said selection command selecting one function from a list of pre-selected functions for input into said computer program, wherein each function from said list of pre-selected functions is associated with a reward; and a processor adapted to execute a learning protocol comprised of learning instructions in said computer program to track and reward said one function that is selected and determine an approximate optimal choice of operation of said computer program based on at least said selection command; and wherein said

pre-compiler further inputs a reward command that provides a reward, at a point of choice, determined by a programmer, in said computer program, for said one function selected by said selection command, which results in said approximate optimal choice for self-optimizing said computer program.

Allowable Subject Matter

4. Claims 1, 5, 7, 8, 11, 13, 17, 19, and 23 are allowed.
5. The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination fails to suggest

“A method of instructing a computer program to self-optimize, said method comprising: inputting a selection command that selects one function from a list of pre-selected functions for input into said computer program at a point of choice determined by a programmer, wherein each function from said list of pre-selected functions is associated with a reward; and allowing a learning protocol comprised of learning instructions in said computer program to track and reward said one function that is selected and to determine an approximate optimal choice of operation of said computer program based on said selection command and further comprising inputting a reward command that provides a reward, at a point of choice, determined by a programmer, in said computer program, for said one function selected by said selection command, which results in said approximate optimal choice for self-optimizing said computer program.”, as recited in independent claim 1 and similarly recited in independent claims 7, 13 and 19

Claim 5, (8, 11), 17, and 23 are considered allowable by virtue of their dependence on allowable independent claims 1, 7, 13, and 19 respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
